Pocketing must have durable press finish and the color of the pocketing must be black in color. Two (2) side pockets will have a minimum opening of 6 ¼" and a minimum depth of 5 ¾" measured from the bottom of the pocket opening. Side pockets shall have a firm straight bartacks at top and bottom of pocket openings (use of triangle bartacks will be cause for rejection). Pockets shall be constructed using the stitch, turn, and topstitch method. Pocket facings shall be made of the basic fabric and measure a minimum of 1 ½" from the bottom of the pocket opening. The watch pocket shall be located on the right front 1" below the waistband. This pocket shall have a minimum opening of ¾" depth of 3 ¾". The front of the pocket shall be made of pocketing fabric and back of the pocket shall be made of basic fabric and the two pieces are securely stitched together. Each corner of the pocket opening shall have a firm straight bartacks. There shall be a club pocket located 5 ¼" (plus or minus ¼") from the side seam with a minimum opening of 3 ½" and minimum depth of 8". Pocketing material to be the same as side and hip pockets. Club pocket shall be constructed using the double welt method on a REECE PW machine and finished in such a manner that there is no topstitching (topstitched club pockets shall be cause for rejection). A button shall be located on the left fly corresponding with the French Fly tab to provide a clean and comfortable closure. **SECTION IX – UNIFORMS, EQUIPMENT & ACCESSORIES FOR THE SHERIFF'S OFFICE (CONT'D)****ITEM #244 – UNIFORM TROUSERS, CLASS A (Cont'd)**

Belt Loops: There shall be a minimum of seven (7) interlined ¾” wide belt loops. All loops shall be tacked to the trouser ½” below the bottom of the waistband. The top of the belt loops (except for the center back loop) shall be caught into the waistband curtain seam with a Rocap machine. The top of the center back loop shall be tacked to the outside of the waistband.

Waistband: The waistband shall be constructed using the “closed method” and shall measure a minimum of 2” wide when finished. The waistband curtain shall finish a minimum 2 1/8” wide and is to be made of the same fabric and color as the pocketing material and shall be attached to the top of the trouser with a zigzag stitch. The waistband curtain must contain Tru-Grip, a ½” surface area composed of thin 55 gauge rubber for maximum comfort and performance. The Tru-Grip acts to help keep the shirt tucked in securely. (Substitution of a silicone strip or strips in place of Tru-Grip shall not be acceptable and cause for rejection). The waistband curtain is composed of a wet laid non-woven canvas weighing 3.3 oz. per square yard. The canvas is covered in the same color and material as the pocketing. The ½” rubberized surface area is positioned 1 ¼” up from the bottom of the curtain. The specifications for the rubberized Tru-Grip curtain are as follows: (Width: 1 1/8”, Warp: 300 Denier Texturized Polyester, Filling: 300 Denier Texturized Polyester, Rubber: 55 gauge, Count: 32-36 yarns per inch, Contents: 59% Polyester/41% Rubber). The waistband must contain ¾” Ban-Rol to prevent roll over at the trouser front. The waistband closure shall be accomplished with a single crush proof hook and eye centered on the waistband for wearer comfort. The hook and eye shall be reinforced with 7/8” non-woven stay tape that is anchored with the topstitching through and through to the top of the waistband (bartacks in place of topstitching shall be cause for rejection). In addition to the stitching of the waistband when it is set onto the trouser, the waistband must also be topstitched below the waistband seam through the waistband curtain for added strength. The back center seam of the trouser is to be finished to allow for alterations (with ample basic fabric and waistband curtain material to allow trouser size to be increased at least one size). The outlet in the seat is to be in proportion to the waist outlet so seat may also be let out. Seat seam must be sewn with a tandem needle machine (double-needle stitch) for maximum strength.

Stitching, Pressing & Finishing: Trouser must be stitched with matching thread and all stitching to show must be 10-11 stitches per inch. Trouser must be neatly pressed on Hothead Presses and properly shaped. Out seams and inseams must be pressed open. Trouser must be cleaned and finished to eliminate loose threads.
