TRAFFIC CONTROL

Description:

This Section describes the requirements for implementing controls to protect vehicular and pedestrian traffic. Traffic control includes providing, installing, placing, relocating, maintaining, and removing traffic control devices.

Equipment:

The following equipment as specified in the listed sections of the NJDOT Standard Specifications for Road and Bridge Construction.

Provide equipment as specified:

Flashing Arrow Board	<u>1001.01</u>
Portable Variable Message Sign	<u>1001.02</u>
Traffic Control Truck with Mounted Impact Attenuators	<u>1001.03</u>
Vibratory Drum Compactor	<u>1003.06</u>

Traffic Control Coordinator:

Before starting Work, submit to the RE the name, training, work experience, and contact information of an employee assigned as the on-site Traffic Control Coordinator (TCC). The TCC must be certified as having successfully completed the Rutgers CAIT Traffic Control Coordinator Program, or an equivalent course as approved by the NJDOT Office of Capital Project Safety. The TCC must also successfully complete an approved Traffic Coordinator refresher course every 2 years. The TCC is a full-time position and the employee designated as TCC must be available on a 24-hour a day, 7-days a week basis. The TCC shall have the responsibility for and authority to implement and maintain all traffic operations for the Project on behalf of the Contractor.

TRAFFIC CONTROL (CONT'D)

The TCC's responsibilities and duties shall include the following:

1. Overseeing traffic control operations, including those performed by subcontractors.
2. Coordinating traffic control with subcontractors, other contractors, and Utilities.
3. Ensuring that set-up and removal is performed according to the Contract.
4. Performing daily traffic control inspections and providing written reports documenting the inspections, including detailed findings and corrections made.
5. Performing inspections at night and on weekends to ensure compliance with the TCP.
6. Ensuring that traffic control devices are correctly positioned and spaced.
7. Ensuring that signs are properly covered or uncovered.
8. Maintaining or replacing traffic control devices to ensure traffic control devices are in an acceptable condition and good working order. Maintenance also includes replacing lights bulbs and electrical components and refueling, recharging, or replacing batteries.
9. Ensuring that excavations and lateral drop-offs greater than 2 inches in depth are eliminated or protected by barrier or emergency escape ramps during non-working periods.
10. Ensuring that routine road maintenance is performed, including debris removal and road cleaning.
11. Ensuring that construction operations do not create flooding or icing conditions for lanes open to traffic.
12. Identify and correcting traffic control deficiencies immediately. Correct traffic control deficiencies directed by the RE within 2 hours of notification.
13. Ensuring that vehicles, equipment, and material stored adjacent to the road are behind barriers or stored at least 30 feet from the traveled way.
14. Ensuring that Contractor vehicles for material delivery enter or exit the traveled way in a safe manner.

Provide additional employees to assist the TCC as approved by the RE. The RE may request the TCC or additional employees to demonstrate their competency at any time. Notify the RE before performing daily inspections to provide the RE with the opportunity to observe the inspections.

Traffic Control Devices

Ensure that FHWA category 1, 2, 3, and 4 traffic control devices conform to the requirements of NCHRP 350. Ensure that traffic control devices meet or exceed an acceptable condition as described in the ATSSA guide Quality Standards for Work Zone Traffic Control Devices. Traffic control devices need not be new but must be in good condition. Provide traffic control devices according to MUTCD.

Erect traffic control devices before beginning construction operations. Trim vegetation that obscures the sight distance of traffic control devices. Keep the traffic control devices clean, and maintain in acceptable condition until no longer required. Relocate traffic devices as directed by the RE. Place traffic control devices as directed to provide traffic control for Department personnel doing inspections, sampling, testing, and taking measurements required for the Project.

1. Construction Signs.

Install anchor posts with soil anchor plates, except when installing in rock or in concrete.

If construction signs are required for less than 3 days, the Contractor may place construction signs on portable sign stands instead of sign posts with the approval of the RE.

TRAFFIC CONTROL (CONT'D)**Traffic Control Devices (Cont'd)****1. Construction Signs: (Cont'd)**

When construction signs or existing signs do not reflect work zone traffic conditions, cover the signs with black polyethylene sheeting. Ensure that the cover is opaque under all lighting conditions and completely conceals the entire front of the sign panel. Securely attach the cover to the back side of the sign without damaging the reflective sheeting. Do not tape the cover to the face of the sign. Ensure that the cover remains secure in all weather conditions. Overhead signs and large guide signs with areas greater than 200 square feet do not need a cover over the entire sign, but require a cover over the conflicting information. Do not alter the face of a sign with revised messages. Remove construction signs when no longer required, and restore the post hole to match the surrounding conditions.

2. Construction Barrier Curb:

The Contractor may use Type 4, Alternate Design A or B construction barrier curb interchangeably in any location where Type 4 has been specified. Only use Alternate Design B, Joint Class D as bridge parapets. The Contractor may use construction barrier curb Type 4, Alternate B in any location where Type 1 has been specified. The Contractor may use construction barrier curb that is constructed using gray or white concrete. Do not place different types or colors of construction barrier curb in a continuous run. Do not use construction barrier curb having any of the following deficiencies:

1. Exposed steel at the connector flangeway.
2. Exposed reinforcement steel.
3. Cracking through the cross section.
4. An area of concrete missing larger than a 3-inch by 3-inch right triangle.
5. Debris in the keyway.
6. Non-functioning anchor bolt holes.
7. Non-functioning anchor rod hole.
8. Paint applied to the surface.
9. Objects protruding from the surface.
10. Previous repairs.

At least 30 days before delivering construction barrier curb to the Project Limit, provide the RE notice that the barrier curb is available for inspection. The RE will inspect the barrier curb and approve individual pieces for delivery to the Project Limits.

When installing construction barrier curb, ensure that the barrier curb is pulled taut. Remove slack from the connection key. Anchor the barrier curb, and grout the joints as required for the joint class. If required, ensure that anchor pins and anchor bolts do not project above the plane of the barrier curb. Before bolting barrier curb to a bridge deck, provide the proposed method of layout and drilling to the RE for approval.

Replace construction barrier curb that does not meet the specified requirements. Do not patch or repair construction barrier curb.

Provide top and side mounted flexible delineators on the construction barrier curb. For delineators located on the right side when facing in the direction of traffic, ensure that the retroreflective sheeting is white. For delineators located on the left side when facing in the direction of traffic, ensure that the retroreflective sheeting is yellow. Attach flexible delineators according to the manufacturer's recommendations.

TRAFFIC CONTROL (CONT'D)

Traffic Control Devices (Cont'd)

2. Construction Barrier Curb: (Cont'd)

Starting at the beginning of the construction barrier curb section mount top delineators at 100-foot intervals on tangent sections, curves of radii greater than 1,910 feet, and at 50-foot intervals on curves of radii of 1,910 feet or less.

Mount side delineators at the lead end of each barrier segment with the top of the delineator 3 inches from the top of the barrier.

3. Flashing Arrow Board:

Provide a flashing arrow board as specified in section 1001.01 of the NJDOT Standard Specifications for Road and Bridge Construction.

4. Portable Variable Message Sign (PVMS):

Place the PVMS at the locations directed by the RE. Ensure that a designated representative familiar with the operation and programming of the unit is available on the Project. Only display messages authorized by the Department for the Project. Repair or replace malfunctioning PVMS within 12 hours of notification by the RE.

5. Temporary Crash Cushion:

Install inertial barrier systems as specified in section 611.03.01 of the NJDOT Standard Specifications for Road and Bridge Construction. Install crash cushions as specified in section 611.03.02 of the NJDOT Standard Specifications for Road and Bridge Construction. Immediately repair or replace crash cushions that become damaged or become inoperable. Maintain an adequate number of replacement parts to repair damaged units at all times. Keep the areas in front, atop, and around the crash cushions clear of snow accumulation of more than 4 inches in depth.

6. Traffic Control Truck with Mounted Crash Cushions:

Provide the RE with a copy of the crash cushion manufacturer's recommendations. Position the traffic control truck to ensure that there is adequate stopping distance after impact and to prevent errant vehicles from traveling around the truck and endangering workers. When used in a fixed position, place manual transmission vehicles in second gear and place automatic transmission vehicles in park. Ensure that the parking brake is set, and the wheels are turned to avoid rolling into active traffic lanes. Do not use traffic control trucks in place of other temporary impact attenuators for more than 24 hours. Relocate the traffic control truck as specified by the TCP, or as directed by the RE. Do not use the truck to carry additional equipment, materials, or debris. When using ballast, ensure that it is secured to the truck. Submit drawings to the RE detailing the manner of securing the ballast, signed and sealed by a Professional Engineer, certifying that it is capable of withstanding the impact forces for which the impact attenuator is rated.

7. Channelizing Guide Posts:

Prepare the pavement surface to provide a clean, sound area to affix the post. Apply an epoxy or butyl adhesive according to the manufacturer's recommendations and bond the base of the post to the pavement surface. Provide only 4-inch diameter tubular channelizing markers. Remove when no longer required.

TRAFFIC CONTROL (CONT'D)

HMA Patch

The RE may direct the Contractor to sawcut existing HMA pavement to the depth of the area to be repaired. Sawcut lines parallel and perpendicular to the roadway baseline and 3 inches away, at the closest point, from the damaged area to be repaired. Remove loose material within the boundary of the repair, and clean the area. Reuse removed material as specified in section 202.03.07.A of the NJDOT Standard Specifications for Road and Bridge Construction. Ensure that the remaining pavement is not damaged.

Apply polymerized joint adhesive or tack coat to the vertical surfaces of the openings. Ensure that the temperature of the HMA when placed is at least 250 °F. Place HMA in 4-inch maximum lifts, and compact with a vibratory drum. For small areas, the RE may approve hand compacting methods. Compact until the top of the patch is flush with the adjacent pavement surface.

Traffic Direction

A. Flagger:

Provide a flagger that has received formal training in flagging operations and the proper use of the STOP/SLOW paddle. The flagger must meet MUTCD qualifications and, when requested, demonstrate competency to the RE. Immediately replace flaggers who fail to demonstrate competency with a competent flagger. Ensure that flaggers wear a 360° high-visibility retroreflective orange safety garment meeting ANSI/ISEA Class 3, Level 2 standards. Ensure that the flagger is equipped with a STOP/SLOW paddle and follows MUTCD flagging procedures.

B. Uniformed Traffic Directors (Police):

If required by State Statute and/or Local Ordinances, Uniformed Traffic Directors shall be provided at the approval of the Engineer. The contractor shall be responsible for establishing an escrow account with the Municipalities for payment of Uniformed Traffic Directors. The County shall reimburse the Contractor for man-hours used shown on payment records paid to the local Police Department, plus 5% for Administrative handling. The County shall not reimburse for vehicle charges separate from the hourly rate for the officer.

STORM DRAIN CLEANING AND TELEVISION INSPECTION

Description:

For the respective unit prices bid per half day and whole day of work under the various subdivisions of this item, the Contractor shall clean, or clean and inspect, by closed circuit television existing storm drains stated in the proposal designated by the Engineer.

The work shall include all labor, tools, equipment and related items as may be required for the complete cleaning or cleaning and internal inspection and television monitoring (including bypass plumbing, drain dewatering and associated work) of the storm drain and removing and disposing of all deposits cleaned from the drains.

All storm drains shall be thoroughly cleaned and permit an unrestricted inspection by closed circuit television. All storm drains will be cleared prior to television inspection. If the television inspection shows drains were improperly cleaned, the Engineer will direct the appropriate cleaning and re-cleaning. Re-cleaning shall be done at no additional cost.

The purpose of the television inspection work is to determine the structural condition of the storm drains and identify areas of the storm drains with vertical misalignments, collapsed or broken pipe.

STORM DRAIN CLEANING AND TELEVISION INSPECTION (CONT'D)

Cleaning Procedures and Equipment:

The Contractor shall clean storm drains prior to internal inspection, utilizing cleaning equipment approved for use by the Engineer. The Contractor shall ensure that the unit price bid for the cleaning item shall be sufficient payment for removing all shapes, sizes and quantities of debris.

Cleaning equipment may consist of hydraulic high pressure jet machines, heavy duty power rodding machines capable of cleaning distances covered under the Contract in one step and heavy duty bucket machines that can be used to drag line work with buckets, brushes, scrapers, swabs or other similar devices. The heavy duty equipment may be necessary for the removal of roots or heavy debris.

Power rodding equipment shall have the capability of spinning the rod either clockwise or counter-clockwise. The equipment shall also be capable of pushing or pulling the rod without rotating the machine.

All cleaning equipment, including machines, devices, tools, etc., required for the entire cleaning operations shall be owned or leased and operated by the Contractor. The Contractor will certify that backup cleaning equipment is available and can be delivered to the site within twenty-four (24) hours. The Contractor shall also submit his equipment list to the Engineer before commencement of the work.

The equipment utilized shall be capable of removing all sand, dirt, rocks and other debris, including roots (where ordered by the Engineer), from the drain line to allow adequate internal inspection (in the opinion of the Engineer) of all internal surfaces. The equipment used shall suit the conditions and size of the sewer to be cleaned.

Contractor shall arrange for the use of hydrants or provide alternate source of water, as necessary, to execute the work. It is the Contractor's responsibility to contact, make arrangements for, and pay for all water to be used on the project. The cost of the water supply shall be the Contractor's responsibility. The local water company may require the Contractor to provide a police officer at the location where water is to be obtained; the cost for this is solely the responsibility of the Contractor. No non-potable water will be permitted for any reason during this project. The local water company may have restrictions on the volumetric rate at which water can be taken from the water distribution system. This effort and any result in productivity on the Contractor's effort is solely the responsibility of the Contractor.

Cleaning shall be performed in the seventy-two (72) hour period immediately before closed circuit television inspection.

All safety precautions outlined in the General Requirements, or required by agencies having jurisdiction, shall be followed by the Contractor during cleaning operations. The cost of such precautions shall be included in the price bid for this item.

All precautions shall be taken by the Contractor to protect the storm drain from damage that might result from the use of unsuitable equipment or improper use of approved cleaning equipment. Any drains damaged during the cleaning operations as a result of the Contractor's operations shall be promptly repaired to an acceptable condition (as determined by the Engineer) by and at the expense of the Contractor. If the Contractor's cleaning equipment becomes immobilized within a storm drain, exits the line through broken pipe or portions break off within a storm drain, said equipment shall be retrieved at the Contractor's expense. The Contractor shall act immediately to remedy problems created by the cleaning procedure, which represent a hazard to the general public, such as the collapse of the ground surface above a storm drain. If equipment retrieval necessitates excavation, the Contractor shall be responsible for accomplishing the work at his own expense. Following removal of the equipment, the Contractor shall restore the line and the site in accordance with the construction specifications of the governing body having jurisdiction.

STORM DRAIN CLEANING AND TELEVISION INSPECTION (CONT'D)

Debris Disposal:

The Contractor shall dispose of debris generated by storm drain cleaning activities under this contract at one of the four (4) dewatering pad locations listed on page 29 of this bid specification. Dumping of the debris at these sites shall be witnessed by the assigned County inspector. The contractor shall request which disposal site to use at the beginning of each work assignment issued to the Contractor.

The inspection will be done one (1) reach (distance between two consecutive manholes) at a time. The reach being inspected will be suitably isolated from the remainder of the sewer system by restricting all upstream flows to allow maximum exposure of the pipe being inspected.

Closed Circuit Television Inspection Procedure and Equipment:

In some instances, more than one (1) sewer reach may have to be inspected per set-up (buried manholes). In these instances, the Contractor shall have adequate cable to deploy the television camera.

Television equipment used for the inspection shall be specifically designed and constructed for storm drain inspection. Lighting for the camera shall be suitable to allow a clear picture for the entire periphery of the pipe. The camera shall be operative in 100 percent humidity conditions and shall be capable of showing the entire inside periphery of the pipe. The camera shall develop and transmit a sharp picture on video bandwidths only. Picture transmission systems that require the use of R.F. suppressors and are subject to local transmitters' interference shall not be used. The camera shall be equipped with an automatic light compensating iris, adjustable optical focus and automatic white balancing circuitry. The camera adjustments shall be set to produce a clear, sharp picture of the internal conditions within the storm drain. The camera lens shall be cleaned prior to each deployment in the storm drain. A television picture with interferences, lines, blurry vision or distortions will not be acceptable. Television equipment, if determined to be unsatisfactory by the Engineer, shall be removed from the job site and replaced with acceptable equipment at no additional cost. The Contractor shall certify that backup equipment is available and can be delivered to the site within twenty-four (24) hours. He shall also submit an equipment list to the Engineer for approval before commencement of the work.

The camera shall be moved through the storm drain in either direction (dependent upon the site's condition) at a uniform, slow rate (no greater than thirty [30] feet per minute) that will allow a clear visual picture to be obtained. The camera shall pause for a minimum of three (3) seconds at every joint or defect observed with the storm drain to allow proper observation. Camera movement through the storm drain shall be accomplished by means of a winch and cables or by a motorized transporter (self-propelled camera). The movement of the camera shall be remotely controlled by the television inspection operator from the inspection vehicle.

The Contractor shall provide a mobile vehicle large enough to accommodate at least four (4) people at any one time for the purpose of viewing the monitor while the inspection is in progress. The owner's representative shall have access to view the television screen and observe all operations at all times.

STORM DRAIN CLEANING AND TELEVISION INSPECTION (CONT'D)

Record of Inspection:

The Contractor will log the results of all observations and prepare whatever data may be required for record purposes. Measurement for location of features along the pipe alignment shall be at ground level by means of a counting meter to be provided and operated by the Contractor. The counting meter shall be mounted on the television reel power winding assembly. The meter shall be equipped with a local mechanical readout for use at the rear of the television vehicle and an electronic counter which is connected to the data view system for display on the video tape. Marking on cable, or the like, which would require interpolation for depth of manhole will not be allowed. The counting meter shall accurately record the distance in feet, which the video cable has traveled. The measurement will be accurate to three-tenths (0.3) of a foot per ten (10) feet of inspected sewer reach length.

The Contractor shall furnish all equipment for video DVD recording. All storm drain inspections shall be recorded on DVD and provided to the County for future reference. The video DVD recording shall begin at the center of the manhole of camera entry. The Contractor shall describe all features encountered while moving the camera from the center of the entry manhole to the distance in the pipe where he sets his footage meter. An audio recording of estimated footages shall be made for all features described prior to setting the footage meter.

On the DVD, the Contractor shall provide during the actual television inspection an audio description of all defects, service connections, joints, discharges or other features considered important by the Engineer.

The date of the television inspection and the distance that the camera has traveled through a particular storm drain reach shall be continuously displayed on the recorded DVD. All DVDs obtained during the work shall be turned over to the Engineer and shall become the property of the owner. All costs for DVD recordings shall be included in the prices bid. If the DVD recording is not complete or the quality is not satisfactory, the storm drain shall be re-inspected at the Contractor's expense.

The Contractor shall make a recording, audio and video, of any defects encountered in manholes designated as ingress and egress locations for internal inspection.

Deliverables:

The contractor shall provide to the County within five (5) working days of the cleaning/televising assignment the following items:

- Written log of cleaning/inspection of the system
- DVD of television inspection
- Map of system cleaned/televised referencing structures and obstructions noted in the video and/or written log
- Bill of lading/disposal tickets for debris removal

STORM DRAIN CLEANING AND TELEVISION INSPECTION (CONT'D)

Obstructions:

Obstructions may be encountered during the course of the internal inspection that prevent the travel of the camera. Each occurrence shall be considered separately. Generally, however, the Contractor shall first attempt to pass the obstruction, and if failing in his attempt or if equipment damage may occur, withdraw the equipment and attempt internal inspections from the opposite end of the storm drain under inspection. Should additional obstructions be encountered after the first re-employment and no means are available for passing the obstructions without damage to the equipment, then the remaining sections of the storm drain not inspected shall be excluded from the work requirements of the Contract. No additional payment shall be made due to difficulties encountered during internal inspection. In addition, the Contractor shall have no claim for payment for internal inspection not completed due to obstructions.

Television inspection of blockages shall be performed at the direction of the RE and only in pipes where obstructions are found. Television inspection shall be performed from both sides of the obstruction. Television inspection will either be performed by the County or intermittently by the Contractor as directed by the Engineer on a full or half day basis.

Some obstructions may be encountered which prevent the Contractor from stringing the cables used to move a television camera deployed by winches. An alternate method of moving the camera shall be employed. The internal inspection shall be attempted to determine the condition of as much of the storm drain as possible. The Contractor shall select the method of performing the internal inspection, i.e., pushing the camera with rods or a jet cleaning machine, or use of a self-propelled camera approved by the Engineer.

The extent of the internal inspection accomplishment shall be at the discretion of the Engineer.

Should the Contractor's internal inspection equipment become immobilized within a storm drain, said equipment shall be removed from the line. If excavation is required to retrieve the Contractor's equipment, the excavation shall

be accomplished by the Contractor at his expense. Following removal of the equipment, the Contractor shall restore the storm drain and the site in accordance with the construction specifications of the governing body having jurisdiction.

Storm Drain Dewatering:

For Systems with submerged or partially submerged outfall(s) the Contractor shall plug the system, where and as needed, to allow the cleaning or cleaning and Television Inspection to proceed. In some instances this may require the use of a barge/boat or the Contractor's personnel to enter the water.

During the television inspection process, every effort shall be exerted to obtain a full view of the pipe interior. For instances where the camera lens becomes submerged or where a large portion of the pipe shall contain water, and these conditions persist for significant portions of the sewer being inspected, the Contractor shall attempt to dewater the pipe. The Engineer shall determine when dewatering procedures are necessary.

Dewatering can be accomplished with a pump and discharge hose or by the nozzle of a hydraulic high-pressure jet machine. If the jet machine is used, it shall precede the television camera through the sewer pipe. The nozzle of the jet machine shall work in conjunction with the television camera's motion and be positioned so that several feet of pipe length can be viewed by the camera. The dewatering procedure shall move standing or ponded water through the storm drain to a point within the storm drain downstream of the reach being inspected.

STORM DRAIN CLEANING AND TELEVISION INSPECTION (CONT'D)

Measurement and Payment:

Measurement of payment for the cleaning, combined cleaning and television inspection, or television inspection only activities shall be made on a whole day or half day basis regardless of the size of the pipes. A work period of 0 to 4 hours shall constitute a half day of work and a work period of 4 to 8 hours shall constitute a whole day of work. Travel time to and from the site will not be considered as part of the work day and shall be included in the various items bid. The Contractor is expected to work the full duration of the work period until or unless the work is complete.

Storm Drain Dewatering or cleaning will not be measured separately and payment will be included in the unit price bid for Half and Whole Day Cleaning and Television Inspection, Storm Drain. In the event the Contractor's equipment breaks down for any reason, no payment will be made if less than four (4) hours was worked or payment will be limited to a half day if more than four (4) hours but less than eight (8) hours was worked.

The basis for non-acceptance by the Engineer shall be any evidence of poor cleaning observed on the video tape recording that prevents the proper internal inspection of the drain reach. No additional payment shall be made for the re-cleaning of drain reaches to an acceptable condition regardless of the number of times re-cleaning may be required. All measurements for payment shall be based upon the actual number of half or whole days of pipe cleaning and television inspection.

No separate payment shall be made for debris disposal. Costs to deliver and dump storm drain cleaning debris at designated County dewatering pad sites listed below shall be included in the half day and full day cleaning and cleaning and televising line item rates.

Additional equipment and/or personnel required to plug submerged or partially submerged pipes will not be measured separately and payment will be included in the unit price bid for Half and Whole Day Cleaning and Television Inspection, Storm Drain.

No payment for services shall be made by the County until all deliverables for the work assignment have been received, reviewed, and accepted by the County.

No separate payment shall be made for police vehicles to accompany the officer that are included in the base hourly rate of the officer.

No separate payment shall be made for the various traffic control devices necessary for "Maintaining and Protecting Traffic, Whole Day" and "Maintaining and Protecting Traffic, Half Day".

- B. ADVANCE NOTICES
- FOR THE INITIAL START OF WORK THAT REQUIRES "IMPACTS TO NORMAL TRAFFIC FLOW", THE CONTRACTOR SHALL NOTIFY THE RE IN WRITING, ON THE ADVANCE FORM TO-00 PROVIDED BY THE DEPARTMENT, OF THE PROPOSED DATE. THE NOTICE SHALL BE SUBMITTED AT LEAST TWENTY-THREE (23) CALENDAR DAYS BUT NOT MORE THAN SIXTY (60) CALENDAR DAYS BEFORE THE PROPOSED DATE START OF WORK. THAT IMPACTS NORMAL TRAFFIC FLOW, WILL NOT BE PERMITTED PRIOR TO THE DATE STATED IN THE NOTICE. THE CONTRACTOR SHALL CONFIRM IN WRITING TO THE RE THE PROPOSED DATE SEVEN (AND/OR FOURTEEN CALENDAR DAYS BEFORE STARTING THE ESTABLISHMENT OF THE TRAFFIC CONTROL MEASURES FOR THE TRAFFIC IMPACT. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE RE IF THE PROPOSED ESTABLISHMENT CAN NOT BE COMPLETED ON THE PROPOSED DATE.
- FOR A "PERMANENT LANE CLOSURE", THE CONTRACTOR SHALL NOTIFY THE RE IN WRITING, ON ADVANCE FORM TO-02 OF THE PROPOSED DATE A NEW TRAFFIC PATTERN WILL BE ESTABLISHED. THE NOTICE SHALL BE SUBMITTED AT LEAST TWENTY-THREE (23) CALENDAR DAYS BUT NOT MORE THAN SIXTY (60) CALENDAR DAYS IN ADVANCE OF THE PROPOSED DATE. START OF A NEW TRAFFIC PATTERN WILL NOT BE PERMITTED PRIOR TO THE DATE STATED IN THE NOTICE. THE CONTRACTOR SHALL CONFIRM IN WRITING TO THE RE THE PROPOSED DATE OF THE NEW TRAFFIC PATTERN SEVEN (AND/OR FOURTEEN DAYS BEFORE STARTING TRAFFIC CONTROL MEASURES FOR THE ESTABLISHMENT OF THE NEW PATTERN. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE RE IF THE PROPOSED ESTABLISHMENT CAN NOT BE COMPLETED ON THE PROPOSED DATE.
