8. Review Automated Traffic Signal Performance Measures (ATSPM) to help improve signal timing along County corridors.
9. Develop alternatives and conceptual designs for intersection and alignment improvements for simple as well as complex traffic operational and safety related issues, including utility and right-of-way (ROW) impacts review.

10. Design both new installations and modifications to existing traffic control devices such as traffic signals, signs, and pavement markings. Prepare traffic signal and electrical plans, specifications and complete bid packages.
11. Conduct all types of drafting activities associated with the design of new and/or modified traffic control devices.
12. Review and comment on Traffic Impact Studies prepared by others.
13. Resolve intersection and corridor longstanding operational issues.
14. Design and/or review detour routes.

25. Review and provide recommendations for site distance issues.

Planning Board Reviews

At the direction of the County Engineer or appointed representative, the Consultant will review material submitted to the Ocean County Planning Board such as plans, traffic impact studies, etc. in an effort to determine the anticipated impacts that proposed ingress and egress to/from the development will have on the safety and/or congestion along the County roadway network. Reviews may involve the following:

1. Review all locations in the field to estimate the existing and/or proposed sight distance to be available to motorists with the proposed development.
2. Advise as to the need for a traffic signal impact study and what elements need to be included in that study.

3. Review Traffic Impact Studies to identify the relative impacts to the County roadway network and evaluate the proposal for appropriate mitigation.
4. Review plans submitted to identify compliance with County, State, and/or Federal Regulations and guidelines regarding Traffic Operations and Safety.
5. Attend, when directed, meetings with applicants and/or representatives.

Noise and Air Quality Analyses

The Consultant will be required to perform a variety of traffic noise and air quality evaluations for projects that are under design or have already been constructed throughout Ocean County. Traffic noise and air quality analyses will be conducted for pre and post construction roadway improvement projects to assess project related impacts, determine areas requiring mitigation measures, type of these measures as well as their analysis for choosing a preferred option. The Consultant will conduct all air quality, noise and impact analyses in accordance with Federal, State and local air and noise regulations, as well as the broader environmental laws (NEPA, SEQRA, CEQRA) which govern air and noise emissions.

The traffic noise analysis will at the minimum include the following:

1. Identify land uses that may be affected from the proposed highway.
2. Predict traffic noise levels for Design Year.
3. Determine existing noise levels in the vicinity of the proposed improvement project.
4. Determine traffic noise impacts.
5. Examine and evaluate noise abatement measures for reducing or eliminating the noise impacts, giving weight to the benefits and cost of abatement, and to the overall social, economic and environmental effects.
6. Determination of noise analysis improvements for traffic signal optimization, adaptive signal and intersection upgrade projects.

The air quality analysis is performed to determine the influence of a proposed highway project on the air quality in the project area (project-level analysis). Some key elements of an air quality analysis are:

1. Determine appropriate evaluation years and receptor locations.
2. Compute average operating speeds, traffic flows and movements.
3. Determine highway mobile source emissions for evaluation years.
4. Compute air quality concentration at the identified receptor locations.
5. Compare these concentrations to the National Ambient Air Quality Standards.
6. Determination of air quality improvements for traffic signal optimization, adaptive signal and intersection upgrade projects.

The Consultant will also be responsible for quality control of the undertaken traffic noise and air quality studies to ensure compliance with laws and regulations pertaining to highway traffic noise and air quality.

Roadway Design

Roadway projects are to be designed in accordance with AASHTO requirements and Ocean County Policy and Procedures. The project may require all or some of the following: field survey; stormwater management; right-of-way mapping and descriptions; permit procurement; utility relocations, as well as preliminary and final roadway design.

Most projects will fall under CAFRA or Pinelands jurisdiction in addition to normal NJDEP requirements.

Deliverables will include: all electronic CADD files in Microstation format (Microstation Version V8i Select Series 3; InRoads V8i Select Series 2); mylars; prints and calculations, signed and sealed by NJPE and NJPLS where applicable.

Ocean County follows NJDOT CADD standards and will provide the selected consultants with seed-files for title sheet; distribution of quantities; sample title blocks; plan sheets and standard details.

Special services such as aerial mapping; environmental studies; subsurface sampling and testing and traffic signal design, if required, may be supplied by Ocean County.

The consultant must designate a specific design team that will be available to perform these services.

Professional Land Surveying Services

The consulting firms will be required to provide field and office surveying and mapping services needed for base map preparation. These professional services will include but will not be limited, upon mutual agreement, to the following:

1. Roadway topography and cross sections.
2. Centerline alignment and property monumentation for road right-of-way parcel acquisitions.
3. Any other survey work as required by the County including deed surveys, deed plottings and monumentation.
4. Right-of-Way Mapping.

Data Collection and Submission Requirements:

- A) A final plot base map on drafting film at a scale of 1"=30'. (Signed and Sealed)
- B) An electronic drawing file compatible to Micro Station. This drawing file shall be an unscaled base file and not a scaled sheet file.
- C) The County uses the Bentley InRoads civil product to produce our line work and the coding system is set up for that purpose.

For field collection we use TDS data collectors using SurveyPro software, version 5.0 or below, import from the new format. We do not, however, use the TDS software feature to produce line work as the coding is not compatible with the InRoads product.

County feature codes consist of three potential parts, the Code itself, a Figure Number and a Control Code.

All linear features, ex. CURB_B, CURB_T, SDWK_E etc., require Control Codes. The Control Codes are as follows and can be combined with the same point. An example would be PT PC for a compound or reverse curve. We do not currently use the TMPL Control Code.

CONTROL CODE	CODE DEFINITION
CL	Close
CLSRECT	Close Rectangle
DIST	Distance (w/taped rect.dist.)
DNC	Do Not Contour
JPT	Join Point
JNC	Join Nearest Code (w/code)
NT	Not Tangent
PC	Point of Curve
PT	Point of Tangent
RECT	Rectangle (Begin)
ST	Start
TMPL	Template (X-Section)

On the following page is an example of the coding and line work it produces.

The Feature Code will consist of the following:

Feature Code(no space)Figure Number(space) Control Code(as needed)(space) Additional Control Codes (as needed).

Figure numbers allow an unlimited number of the same Feature to be open concurrently. An example would be: a divided highway with interior parking lots on both sides, you could easily have six or more CURB_T codes open at one time, each with a separate figure number.

Linear codes, generally break-lines, connect from one point to the next higher point number with the same code/figure number until there is a new start code issued. For this reason, it is imperative to use figure numbers in association with the codes if and when Consultant coding is being converted for County use.

An example would be: Using CURB_T1 for the left curb line an initial start code would be issued for the first shot, the shots would continue down the curb line around a side street radius and a new start code for CURB_T1 would be issued when you cross the side street.

Linear features shots must be taken in one direction only, preferably up station and Figure Numbers should be used, as this will facilitate the common Left to Right, move up, Right to Left cross section method.

ASCII comma separated files should be saved in the MS-DOS ".csv" format with information in the following order:

Point Number,Northing,Easting,Elevation, FeatureCodeFigureNumber(no spaces) and All control Codes (space separated), Note (if any). (Such as 8" Double Oak or Utility Pole Numbers.)

- D) This data collector file shall use the Ocean County Engineering feature/preference coding. An electronic and hard copy of the County feature coding will be provided for your use. If uploading the County feature coding into your data collectors will result in the creation of an inaccurate drawing deliverable, the data collector file shall be manually modified to reflect the County coding before submission of the required file.
- E) An ASCII text file and print out of the coordinate data.
- F) An ASCII text file and print out of the points associated with the individual breaklines/alignments collected and or used in the field.
